

1. Discover schema from requirement
 - ER model (done)
 - Relational model (done)
 - Create table instruction (PK/FK/Other constraints) (done)
 2. Reflect schema with menus(done) For each menu, find out:
 1. What table should be shown and operated
 2. Component structure
 3. Menu transition
 3. Implment required business logic(done)
 4. Bind business logic to menu(done)
 5. Test(done) 3, 4, 5 should be conducted in functionality group manner
-

必做缺漏

Navigation

1. APP is composed of SideNavigation(old main_frame) and RightContentPanel(other frames) [done]

A. SQL VIEW (Database Design 25分) [done]

要求 at least one **CREATE VIEW** used in the app, 目前完全沒有。

- 建議: **RoomStatusView** (JOIN Room + Stay 推導 occupied/available)
- 或把 **get_maintenance_requests** 的 JOIN 改成 VIEW

1. Room search filter(all/occupied/available)

B. LIKE 搜尋 (Application Features 25分) [done]

要求 at least one search using **LIKE** or comparison operators, 目前全部是 **=** ? 完全匹配。

- 建議: maintenance viewer 的 username 搜尋改成 **LIKE ?** (加 % 模糊搜)

C. Many-to-many junction table (Database Design 25分) [done]

要求 at least one many-to-many via junction table。

- **Stay** 連接 User ↔ Room, 屬於 associative entity, 應可算數, 但要在 write-up 中說明清楚。
-

選做改善

1. 統一用表單提交觸發DB操作(雖然是退後 但統一)
2. 統一排版, 由上到下分別是

```

TabContainer
  TabForSomeAction
    InputField
    Button
  TabForOtherActions
    ...
  List
    Item
    Item
    ...

```

3. ListView預製Item分頁提供內容(很慢)

墳場

1. Logout

非程式項目

項目	說明	分數	完成
ER Diagram	手繪，PK 底線，標示 cardinality，需清晰可讀	10	O
Write-up	3-4 頁 PDF，含 schema 設計說明 + AI 使用聲明	10	
Demo Video	3 分鐘內，展示 admin/resident 兩種角色操作	10	
README	說明如何執行程式	—	O
